

Guide for Managing Records and Deploying Changes:

Accessing the Django Admin Panel To add records via the Django admin panel, follow these steps:

1. Open your web browser and navigate to [Django Admin Panel] (<https://web.panacomps.com/admin>).

2. Login with the super admin credentials:

****Email:** a@a.com

****Password:** admin

Adding Records

1. After logging in, you will see a dashboard with various models listed.
2. Click on the model you wish to add a record to (e.g., Metrics, Folio, etc.).
3. Click the "Add" button (usually at the top right).
4. Fill in the required fields in the form.
5. Click "Save" to add the new record.

Deploying Changes:

Connecting via SSH To deploy new changes, you need to connect to the server via SSH.

1. Open your terminal (Command Prompt, PowerShell, or any SSH client).
2. Connect to the server then you will see:

```
h ssh ec2-user@i-0159096bab94fe736
```

3. Once connected, navigate to the project directory

```
cd panacomps-web-app/
```

4. Activating the Environment

You only need to activate the environment if you are adding new requirements. To activate the environment, use the following command:

```
source venv/bin/activate
```

Deploying New Changes

1. Pull the latest changes from the main branch on GitHub:

```
git pull origin main
```

2. Restart the necessary services:

```
sudo systemctl start nginx.service gunicorn.socket
```

Checking Logs and Errors

To check logs and error messages, use the following commands:

- For Gunicorn logs:

```
sudo journalctl -u gunicorn.socket
```

- For Nginx logs:

```
sudo tail -f /var/log/nginx/error.log
```
